GridLiance West is upgrading a portion of its existing single-circuit 230-kV overhead transmission line system between the Trout Canyon Substation and the Pahrump Substation and upgrades or expansions of two associated substations (Gamebird Substation and Pahrump Substation).

The upgraded transmission line will generally be adjacent to the existing single-circuit 230-

1 kV transmission line alignment, except for the Gamebird Substation to Pahrump Substation
2 segment, where the upgraded transmission line will be routed in a different location to minimize
3 impacts on private property that would occur with an upgrade directly adjacent to the existing line.

4 The existing overhead transmission system is approximately 14.1 miles long and
5 comprised of two segments of single-circuit 230-kV transmission line. Portions of the single-
6 circuit transmission line (the Gamebird Substation to Pahrump Substation segment) are hung on
7 poles and in rights of way shared with 138-kV infrastructure owned and operated by Valley
8 Electric Association. The approximately 14.1 miles of existing 230-kV transmission line will be
